

VIRTUAL CODE · NETWORK CATALOGUE PUBLICATION

# Automated Systems Accountability Act

Issuing office: Digital Rights & Standards Commission

A significant automated scenario decision must have a named owner and a review route.

## Network scope and limits

United Network Federation is an independently presented, privately administered digital-network governance framework. Its charter, participation rules, registry entries, reviews and dispute procedures operate only within services and among participants that adopt them. These publications are not government instruments, statutory licenses, judicial orders, public registrations or proof of independent security certification. A registry match confirms a publication in this network catalogue only. Sponsorships or external approvals require separate, verifiable evidence.

## Record particulars

|                                     |                                                                                                                                                                                                                    |

| Subject / named party               | UNF virtual institutions                                                                                                                                                                                           |
| Catalogue publication date          | 2026-10-07                                                                                                                                                                                                         |
| Registry listing status             | PUBLISHED IN NETWORK CATALOGUE                                                                                                                                                                                     |
| Validity and limitation             | Valid only as a network-specific network catalogue record. Review date: 2027-10-07; not a government or statutory document.                                                                                        |
| § 220.1 · Purpose and virtual scope | This network-defined Code governs network-defined automated decisions within the UNF universe only. It has no effect in any real jurisdiction.                                                                     |
| § 220.2 · Defined terms             | “Institution” means an expressly network-defined UNF body. “Record” means a published sample network catalogue entry. “Review” means a documented scenario process concerning network-defined automated decisions. |
| § 220.3 · Responsible institution   | Digital Rights & Standards Commission coordinates this Code, with procedural support from VDJA and oversight from OFIG.                                                                                            |
| § 220.10 · Primary rule             | A significant automated scenario decision must have a named owner and a review route.                                                                                                                              |
| § 220.11 · Implementation duties    | A review record must describe intended use, input assumptions, known limits and challenge options. Sample outcomes should be tested for differential impact before deployment in the story.                        |

|                                          |                                                                                                                                                                                                                                                   |
|------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| § 220.12 · Protected principle           | Each application must respect explainability and human review. The institution records the purpose, evidence limits, response opportunity and responsible reviewer.                                                                               |
| § 220.13 · Limitations                   | No action under this network-defined Code permits real-world surveillance, access to accounts, seizure, enforcement, licensing or legal determination.                                                                                            |
| § 220.20 · Notice and record             | Before an adverse network-defined determination, the responsible office states the facts and cites UNC-220 § 220.10, allowing at least fourteen scenario days for a response.                                                                     |
| § 220.21 · Outcome and appeal            | A reasoned outcome states findings, uncertainties and corrective options. Review follows UNC-240; tribunal proceedings also observe UNC-100.                                                                                                      |
| § 220.22 · Publication and retention     | Sample public records include a network-scope notice, issuer, status, date and related record identifiers. Private portal submissions remain separate and are subject to thirty-day receipt expiry and removal on a later report-service request. |
| § 220.30 · Review cycle                  | The coordinating institution reviews this network-defined Code annually and publishes a change note. Material amendments require consultation and recorded approval within the story.                                                             |
| § 220.31 · Effective date and transition | Version 1.0 takes effect on 7 October 2026 in the network-defined chronology. Earlier sample matters retain their published procedural safeguards.                                                                                                |

Review, corrections and verification

Record amendments may be published with a version history, responsible issuing office and reason for change. Verify the exact identifier in the federation registry. A catalogue match verifies published data and file integrity only, not third-party approval or statutory authority.
